+91 8928298502 | [sardarabhay90@gmail.com](mailto:sardarabhay90@gmail.com) | [LinkedIn](#) | [GitHub](#)

## PROFESSIONAL SUMMARY

Detail-oriented Full-Stack Developer proficient in the **MERN stack**, **Next.js**, and **TypeScript**. Experienced in designing scalable **REST APIs**, implementing **real-time systems**, and optimizing database performance. Strong foundation in software engineering principles with a proven track record of building performant, production-ready applications.

## EDUCATION

### Fergusson College

Bachelor of Science in Computer Science (CGPA: 9.27)

Pune, MH

Expected Apr 2026

## PROJECTS

### DevPulse | React, TypeScript, Node.js, Redis, GraphQL API | [Live Demo](#) | [GitHub](#)

May 2026

- Engineered a real-time developer analytics dashboard utilizing the **GitHub GraphQL API** to aggregate **52-week contribution heatmaps** across 50+ repositories.
- Implemented **Redis caching** with a 1-hour TTL, successfully preventing GitHub API rate-limiting and reducing repeat request latency to **under 10ms**.
- Designed a persona-classification algorithm to categorize commit patterns and integrated **GitHub OAuth** for secure private repository access.
- Architected a seamless user experience with **zero login friction** and generated shareable server-side PNG cards via **node-canvas**.

### HarmonyHomes | React, Node.js, Express, PostgreSQL, Prisma, Socket.io | [Live Demo](#) | [GitHub](#)

Nov 2025

- Architected a **scalable backend** designing reusable **REST APIs** across 14 domain models for household, expense, and event workflows.
- Engineered a normalized **PostgreSQL** schema with **Prisma ORM**, utilizing efficient relational queries and cascade constraints to reduce dashboard latency by **30%**.
- Integrated **real-time synchronization** via **Socket.io**, enabling low-latency event broadcasting and multi-user updates across concurrent sessions.
- Secured server-side logic utilizing **JWT authentication**, **Bcrypt** password hashing, and robust validation middleware for protected routes.

### Synapse Healthcare | Next.js, TypeScript, Appwrite, Zod | [Live Demo](#) | [GitHub](#)

Jan 2026

- Developed **secure server-side workflows** for patient registration, appointment booking, and admin scheduling using **Next.js** and **TypeScript**.
- Integrated backend services with **Appwrite** for seamless authentication, cloud database operations, and secure messaging.
- Enforced strict input validation across the application using **Zod**, significantly improving data integrity and reducing invalid submissions prior to **database persistence**.
- Refined admin-patient interactions by debugging state synchronization issues and ensuring responsive frontend behavior across mobile and desktop devices.

### CartFlow E-Commerce | React, Node.js, Express, Sequelize, SQLite | [Live Demo](#) | [GitHub](#)

Dec 2025 – Jan 2026

- Built comprehensive **REST APIs** for product retrieval, cart operations, and checkout state management using **Express** and **Sequelize**.
- Integrated frontend services in **React** with backend APIs, significantly improving UI responsiveness and data consistency across user flows.
- Configured automated **CI/CD workflows** utilizing **GitHub Actions**, **Vitest**, and **React Testing Library** to guarantee code quality and deployment confidence.
- Structured the application for deployment portability with **environment-based configuration** and database abstraction, enabling easier scaling to production.

## TECHNICAL SKILLS

**Languages:** JavaScript (ES6+), TypeScript, Java, SQL, HTML/CSS

**Frontend:** React, Next.js, Redux, Tailwind CSS, React Router

**Backend:** Node.js, Express, REST/GraphQL APIs

**Databases & Caching:** PostgreSQL, MySQL, Redis, SQLite, Prisma, Sequelize, Appwrite

**Tools & DevOps:** Git, GitHub Actions (CI/CD), Postman, Socket.io, Vite, Docker, Vercel
