PROFESSIONAL SUMMARY

Detail-oriented Frontend-focused Developer specializing in building responsive web applications using **JavaScript (ES6+)** and **React**. Experienced in designing modular component architectures, managing complex UI states, and implementing client-side data validation. Familiar with modern tools like **Next.js** and **TypeScript** to create performant, accessible, and interactive user experiences.

EDUCATION

Fergusson College

Bachelor of Science in Computer Science (CGPA: 9.27)

Pune, MH

Expected Apr 2026

PROJECTS

CartFlow E-Commerce | *React, TypeScript, Vite, React Router, Axios, Vitest* | [Live Demo](#) | [GitHub](#) Dec 2025 – Jan 2026

- Architected a route-driven e-commerce platform using **React Router** for seamless client-side navigation across catalog, cart, and order tracking views.
- Developed dynamic catalog views with query-parameter filtering and an API-driven real-time search engine mapping structured product arrays to grid layouts.
- Implemented global shopping cart functionality featuring local state synchronization, dynamic item quantity updates, and continuous calculation models for tax and shipping thresholds.
- Decoupled structural interface blocks into reusable layout utilities (header, grid arrays, list cards) using **Axios** for centralized REST data management.
- Authored component lifecycle and rendering validation routines using **Vitest** and **React Testing Library** to safeguard core item insertion and checkout interactions.

Synapse Healthcare | *Next.js, TypeScript, Appwrite, Zod, Shadcn/UI* | [Live Demo](#) | [GitHub](#) Jan 2026

- Engineered an interactive patient-onboarding platform using complex multi-step forms across distinct medical validation, booking, and administrative modules.
- Designed clean form interfaces using **React Hook Form** combined with **Zod schema validation** for precise client-side error handling and data consistency.
- Constructed an administrative dashboard utilizing sortable, filterable data tables, status badges, and custom modal flows using **Shadcn/UI** and Radix primitives.
- Integrated application UI with backend object workflows via **Appwrite** to handle authentication states, drag-and-drop attachment files, and record tracking queries.
- Implemented explicit component routing barriers and custom fallback states to handle missing database payloads, loading flags, and error boundary behaviors.

DevPulse Analytics | *React, TypeScript, Node.js, GitHub GraphQL API* | [Live Demo](#) | [GitHub](#) May 2026

- Built a search-driven metrics engine that tracks profile arrays and showcases custom interactive language charts from a simple username lookup.
- Designed data-rich profile views featuring custom contribution heatmaps, trend line distributions, and language metrics utilizing modern chart components.
- Created a route-based interface to compare developer profiles side-by-side, passing parameters through custom hooks to track asynchronous loading behaviors.
- Integrated client-side **GitHub OAuth** authentication toggles to expand view boundaries and display shareable png card
- Connected custom interface data-fetching workflows to an Express gateway layer to leverage caching architectures and maintain UI render responsiveness under 10ms.

TECHNICAL SKILLS

Core Frontend Development: React, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS, React Router, Redux
Frameworks & Ecosystem (Familiar): Next.js, TypeScript, Node.js, Express, Axios, REST/GraphQL Integration
Testing & Architecture: Vitest, React Testing Library, React Hook Form, Zod Validation, UI Component Optimization
Tools & Infrastructure: Git, GitHub Actions, Postman, Appwrite, Vite, Vercel
